Cochlear Manufacturing Facility

cochlear

New Development

The Cochlear Manufacturing Facility, located in Lane Cove, New South Wales, is a newly developed site, for producing state-of-the-art hearing devices.

Decrolux is proud to contribute to this project by providing a detailed lighting design, and offering a premium product solution. We supplied 140 Burnet Cleanroom panel lights (40W, 1200 x 300) and 8 Burnet Cleanroom panel lights (24W, 600 x 300) for the project.

The Burnet Panel Light is one of the thinnest surface-mount Cleanroom Lights available. At only 12mm, it seals tightly to a coolroom panel with a silicone gasket. Fasten from the front, then cover the screws with silicone caps. The power supply is mounted on the top side of the coolroom panel for easy access & maintenance later on.

A simple design that is easy to maintain & clean!

PROJECT DETAILS

Location	Lane Cove, NSW
