The Vale Aircraft Hangar

The VALE Aircraft Hangar 000011 2

New Development

In the north west of Tasmania, The Vale in Sheffield is home to a produce farm and a large private airfield including a 1300 metre grass airstrip that runs along the valley floor. Constructed in 2020, a new hangar was built to house the property's aviation equipment and aircraft assets. A crucial part of the build was ensuring that proper and sufficient lighting was incorporated through a precise lighting design.

At a 7.4m mounting height, an average of 600 lux is achieved throughout the space, providing superior uniform brightness. The premium Venus 200W Highbay was paired with an aluminium reflector to control and reduce the glare that can be present in high light output situations. A Digital Addressable Lighting Interface (DALI) control system was implemented for ultimate versatility and control. DALI is a two-way communications protocol used to provide control over, and communication between the components in a lighting system. It is easy to install and is widely recognised as the global standard for lighting control. The lights and control system are providing an exceptional "shadowless" experience for Simon Hackett at the Vale.

PROJECT DETAILS

Location	Sheffield, TAS
Client	Base64
Architect	Neeson Murcutt Architects
Electrical Engineer	Decrolux
Builder	Bison Constructions
Completion	2020
Standard	AS1680 Interior and Workplace Lighting
Average Lux Achieved	600 lux
