

Mid Hinge Light Poles

Safe Access, Fast Maintenance, 4.5m

Mid-hinge poles are purpose-built for sites where access is difficult or safety is high-risk. A single operator can lower the head frame to a working height in minutes, maintaining high worksafe compliance and low traffic management costs—perfect for car parks, service stations, campuses, and remote communications sites.

When raised, the pole carries the same wind loads as a fixed pole, meeting **AS/NZS 1170.2** across Wind Region A. Integrated safety lugs allow you to attach a temporary fall-arrest line during lowering, while the balanced heel-to-toe geometry prevents uncontrolled drops.

Available in 4.5, 6, 8, 10, and 12 metre heights with 60mm or 76mm spigots, every pole is hot dip galvanised to **AS/NZS 4680** and can be finished in a low glare textured powder coat. Install mid-hinge poles, and give your team tool-free, ladder-free access for decades of easy, on-the-ground maintenance.
