

# Round Pipe Light Poles

## Straightforward Strength, Cost-Smart Versatility

Round pipe poles are the workhorse of Australia's lighting and utility landscape. Their constant-diameter shaft keeps fabrication simple, lead times short, and unit costs lean - ideal for projects that need reliable infrastructure without the architectural price tag.

Because loads are transferred evenly around the full 360° profile, these poles handle wind, banner arms, and CCTV brackets with balanced strength, while installers enjoy unlimited rotation for perfect luminaire aiming. Universal band clamps and strap-mount accessories slip on anywhere along the pipe, making retrofits and smart-city upgrades fast and fuss-free.

Built from high-grade, precision-welded steel pipe, each pole is robotically straightened, pressure-tested, and hot-dip galvanised to **AS/NZS 4680**, with optional low-glare textured powder-coat for coastal or architectural sites. They meet wind actions in Regions A under **AS/NZS 1170.2**, ensuring dependable performance across the Eastern Seaboard.
