

Square Poles

Heavy Duty

Straight-Edge Strength, Easy Hardware Mounting

Square steel light poles deliver a crisp, contemporary silhouette that withstands Australia's most demanding conditions. Their flat faces give you rock-solid torsional strength - perfect for wind-prone coastal sites, banner arms that catch sudden gusts, or sports field floodlights that create unbalanced loads.

Those same faces make life simple for installers: brackets, CCTV cameras, 5G antennas, solar panels, and signage bolt on flush without shims or special adapters, keeping aiming precise and maintenance budgets low.

Fabricated from high-grade steel, each shaft is seam-welded and robotically straightened to ensure uniform wall thickness and dead true alignment. All poles are hot-dip galvanised to AS/NZS 4680 (with an optional textured powder-coat finish) for decades of corrosion protection, in Wind Region A, as per AS/NZS 1170.2.

Because the sections stack efficiently on a truck and within a yard, freight and storage costs stay lean. Specify 60 mm or 76 mm spigots, add optional service doors or banner arms, and know that your lighting, security, or smart-city hardware has a foundation built to last.
