

# Streetlight

## Reducing Sleeve

The Streetlight reducing sleeve is a valuable tool for electricians retrofitting existing pole mounts with Decrolux LED Streetlights. With traditional fluorescent fittings having a 38mm spigot size, the reducing sleeve allows for a seamless fit of Decrolux Streetlights without requiring the replacement of the entire pole mount. This accessory can save time and money, while also offering improved energy efficiency and lighting performance using LED technology.

Speak to a Decrolux Consultant today, for custom requirements.
